Reference for Erik Kaimer Olsen

Date: 2015-04-20

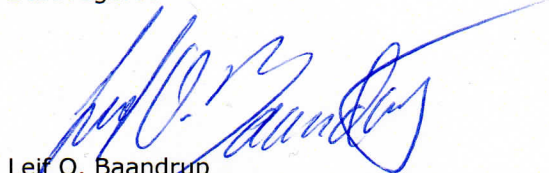

Dear Sir / Madam

The first time Erik Kaimer Olsen joint one of my projects was in 2011 where he became responsible for constructing and engineering the first prototype in our Green Magnets™ R&D project. He constructed and assembled the first prototype in collaboration with our lead physicist. It was a success and provided the team with valuable experience to mature the technology. Erik demonstrated excellent skills in collaborating with the scientific oriented staff bringing their ideas into reality.

The next time Erik contributed to my projects was in 2013 where he jointed our developing project for super conducting magnets. Again Erik brought the developing engineers ideas into reality. He was specially focused on materializing the super conducting coil, assembling the complex magnet construction and super conducting electrical construction. Erik performed the tasks carefully and accurately always documenting the work. He provided good ideas to improve the quality and his easy going attitude meant a lot to our collaboration. Erik always arranged his working hours for the benefit of the project.

I give my best recommendations for Erik Kaimer Olsen.

Best regards

Leif O. Baandrup
